1. Dependability					
2. Attention to details					
3. Integrity					
4. Conscientiousness					
F. Manual dexterity	1	2	3	4	5
1. Visual/Motor Skills					

Legend: 1- Very Low 2- Low 3- Average 4- High 5- Very High

### REMARKS

**Cognitive Functioning,** Ms. JUANILLO'S General cognitive ability falls within **Very High** level that implies her normal ability in dealing with intellectual endeavors under pressure. She is capable in completing activities requiring logic and scholastic skills.

**Psychological Functioning,** Based on her pattern of responses she it is likely that she is able to motivate herself to work on tasks that she may find uninteresting or that will take a long time to complete. She tends to make decisions easily and probably does not second-guess herself. She is also likely to feel comfortable sharing her ideas with others. Likewise, it is likely that she can control her temper easily and approach heated situations in a calm and controlled manner. She tends to avoid arguments with coworkers and can disagree without arguing. More so, she may have the potential to perform reasonably well at tasks that require precision, although she may not prefer this kind of work. It is likely that she is very organized at work and works quickly and efficiently. However, she might need to actively cultivate personal relationships with others and she needs strong emotional support especially in a stressful situation.

**Clinical Functioning,** Profile is suggestive of normal degree of control and rigidity. Sense of goal-orientedness was noted coupled with striving for power. Nonetheless, sensitivity to criticism was seen. Anxious tendencies were also noted so far. No traces of deviant behavior were seen. Her coping mechanism was fair at the moment. Generally, she has a positive working disposition.

#### Recommendation:

- ☒ Recommended  
☐ Fairly Recommended  
☐ Not Recommended

#### Note

The basis of the recommendation affixed herein is limited to the result of the assessment process facilitated by Psycore.
